

## About Our Mobile Dental Program

Compass Health Network provides exceptional dental care in an attentive manner, to patients of all ages. With the convenience of bringing our mobile dental unit to you! So, no more school or work hours missed to make a dental appointment.

Meeting the needs of our patients is Compass Health Network's #1 goal. We serve our communities through educational outreach programs.

The Mobile Dental Unit was created to better serve our communities' oral health care needs, by avoiding the need for transportation, along with quality dental care. Through continuous service both preventive and restorative treatment our goal is to ensure each community is being reached.

## Nursing Home Program

The Nursing Home Program was designed to arm nursing home staff with education and skills needed to provide daily oral care to prevent oral disease. A Registered Dental Hygienist will visit with the staff, present an educational PowerPoint including how to care for residents' natural teeth and gums along with how to handle and care for removable partials and dentures. They review with hand over hand skills until the staff is comfortable. Common oral conditions and problems are discussed along with the opportunity for questions.

## Third Grade Education Program

Compass Health Network's Third Grade Education Program is designed to provide students with a hands-on approach to learning about good oral health care. Our team will create a fun environment to grab and keep your student's attention through visual demonstrations along with learning about the Three Positive P's:

- Practice
- Prevent
- Protect

## Cavity Free Kids Club

The Cavity Free Kids Club is a program designed to reward and congratulate children between the ages of 0 to 17 years of age who are Cavity Free at their six-month dental check-up or recall appointment. Once the dentist has completed their check of the patient's teeth they along with their dental assist or hygienist will award the child with a special certificate deeming them Cavity Free and the child can write their name on a special tooth for display on our Cavity Free Kids Club board located in the lobby of each office.

## Middle School Program

The Middle School Program was designed to discuss nutrition, hygiene, and stress on an adolescent level. Cavities are the #1 preventable disease in children, and nutrition and hygiene play a huge roll in their prevention. It has been reported that kids as young as 12 vape. To prevent this luring pandemic – our team visits schools and presents an educational PowerPoint and has open conversations to provide nutrition and hygiene tips and other ways to combat stress.

## Preventive Services Program

The Missouri Preventive Services Program is designed by the Missouri Department of Health and Senior Services. This program allows dental offices within communities to team up with local school districts to provide free exams and apply fluoride varnish to students. This is a completely free program provided by the state and a free screenings provided by Compass Health Network staff. The Preventive Services Program is a great referral source for the school districts and families serviced, so we can better care for the children in our communities.
