

The NAVIG8 program offers a comprehensive array of intensive on-site, in-home, and school-based services using various evidence-based approaches for co-occurring services. These include family strengthening, motivation enhancement, and support-focused treatment.

The NAVIG8 program is based on the premise that the primary responsibility for the development and well-being of the adolescent lies with the support system and emphasizes the role of society in supporting caregivers.

Clients will learn to utilize a variety of new skills and leisure activities which support sobriety. Our staff will help clients to identify and engage with extracurricular groups maintained by their schools or independent community sources to further their exploration of these skills in hopes of helping them to increase connections with positive peer supports.

NAVIG8 offers regular group programming, and some locations may offer residential or drop-in services. (hours determined by location).

NAVIG8 Adolescent Treatment Program

Compass Health
Network

NAVIG8 PROGRAM INCORPORATES . . .

- A focus on community by strengthening relationships between caregivers and staff, partnerships with community organizations for more effective collaborative care (including resource acquisition and referrals), and improving outcomes for teens and within the family system.
- Integration of culture with focus on responsiveness to all support system compositions; regardless of race, culture, home language, sexual orientation, and identity. Our vision includes partnering effectively and respectfully with families and caregivers.
- Comprehensive wraparound services using strategies and interventions to build protective factors through small but significant changes in program practice by strengthening:
 1. Enhancing positive social connections
 2. Concrete support in times of need
 3. Knowledge of parenting and child development
 4. Social and emotional competence of teens
 5. Education on quitting tobacco/nicotine

NAVIG8 CONTINUUM OF CARE

SUD Services at Compass Health Network are based on the ASAM Model of Care, which supports the provision of services along a comprehensive continuum of care. Treatment outcomes improve when services are provided in the ASAM level of care assessed to meet your needs. All levels can include individual and family therapy, group programming, community and peer support, psychiatry and nursing services, withdrawal management, and medication assisted treatment.

When clients are referred for evaluation and placement with the NAVIG8 program their level of care is determined according to ASAM criteria. Wellness plans, or goals and strategies for treatment, are collaboratively developed between the adolescent client, their family, and their assigned treatment team members. Service assignment and frequency varies depending on individual client needs and is re-evaluated regularly.
